

3500/22M Transient Data Interface User Manual

The 3500/22M TDI is the communication interface between 3500 rack monitors and external systems, streaming dynamic and transient data to condition monitoring software.

This manual covers:

- Module installation and rack configuration
- Network settings and data streaming
- Transient data files captured during startup and shutdown
- Communication with 3500 System Configuration software

Version v5.0 applies to the current firmware release.
